

ABSTRACT OF THE DISCLOSURE

The present invention relates to an image display apparatus and a manufacturing method thereof.

An image display apparatus of the present invention

5 comprises a hermetic container including, as constructive members, a first substrate and a second substrate opposite to each other, and an image display means disposed within the hermetic container, wherein a conductive bonding member for sealing the

10 first substrate and the second substrate is disposed between the first substrate and the second substrate, and an electric potential of the conductive bonding member is specified.

A method of manufacturing an image display apparatus having a hermetic container including, as constructive members, a first substrate and a second substrate opposite to each other, and a image display means disposed within the hermetic container

15 comprises a step of disposing a conductive bonding member between the first substrate and the second substrate, and sealing the first substrate and the second substrate by heating the conductive bonding member, and a step of specifying an electric

20 potential of the conductive bonding member.
